Intersection Safety Screening

Intersection: CSAH 11 (FOLEY BVLD) @ 102ND AVE

Statewide Averages based on 2016-2020 crashes

Crashes by Crash Severity	
Fatal (K)	0
Serious Injury (A)	0
Minor Injury (B)	1
Possible Injury (C)	0
Property Damage (N)	0
Total Crashes	1

Intersection Characteristics	
Entering Volume	14,895
Environment	Urban
Lighting	Lit
Traffic Control	Thru-Stop

Annual crash cost = \$46,000

Statewide comparison = Urban, Thru/STOP

Total Crash Rate	
Observed	0.037
Statewide Average	0.128
Critical Rate	0.320
Critical Index	0.12

Fatal & Serious Injury Crash Rate	
Observed	0.000
Statewide Average	0.311
Critical Rate	3.520
Critical Index	0.00

The observed crash rate is the number of crashes per million entering vehicles (MEV). The critical rate is a statistical comparison based on similar intersections statewide. An observed crash rate greater than the critical rate indicates that the intersection operates outside the expected, normal range. The critical index reports the magnitude of this difference (i.e. observed crash rate ÷ critical crash rate).

The observed total crash rate for this period is 0.04 per MEV; this is 88% below the critical rate. Based on similar statewide intersections, an additional 8 crashes over the five years would indicate this intersection operates outside the normal range.

The observed fatal and serious injury crash rate for this period is 0.00 per 100 MEV; this is 100% below the critical rate. The intersection operates within the normal range.
